Beyfortus (Nirsevimab) Waiver

RSV Antibody Injection

RSV (respiratory syncytial virus) is a common virus in infants and children. Severe forms of this virus can result in more serious illnesses including the need for hospitalizations. Beyfortus is a monoclonal antibody injection that offers protection against RSV through the season (approximately 5 months). It is recommended by the American Academy of Pediatrics as well as the CDC for all infants under the age of 8 months and some children 8-19 months at higher risk for severe illness.

Due to the high cost of purchasing this antibody injection, coupled with insurance company reimbursement uncertainties, we cannot guarantee your insurance will cover this injection. Please be aware that should your insurance company deny payment for this injection, you will be responsible for the cost of the injection (\$675.) We encourage parents to contact your insurance provider directly to confirm coverage.

If you have questions regarding the immunization, please ask your healthcare provider and we would be happy to discuss the risks and benefits. We appreciate your understanding as we navigate this new process while striving to provide the best possible care for our patients.

By signing my name, I verify that I have legal guardianship over the patient named below. I have read and understand the terms. **I understand that the patient will receive the Beyfortus (nirsevimab) injection. I understand that I will be responsible for the cost of the injection if my insurance does not pay or applies the cost of the injection or its administration to my deductible.**

My signature below also indicates that I am verifying that the patient does not have any form of state insurance or Medicaid MCO insurance.
